THE RECOGNITION IS NEW. THE COMMITMENT BEHIND IT ISN'T.

Codonics has never built technology to win awards. We build it to solve real clinical problems — **in the operating room, at the point of care, where medication safety, workflow and documentation have to work together.**

But lately, the recognition has been hard to miss.

Since 2011, the **Safe Label System® (SLS)** has helped bring visual and audible medication verification and TJC-compliant, barcoded syringe labeling directly to the point of preparation. **SLS-WAVE™** extends that barcode into the EHR for electronic documentation at administration.

Now, **Safe Waste System™ (SWS)** extends the story again—bringing liquid controlled substance waste processing and data for reconciliation to the point of care, **greatly reducing the waste documentation burden on anesthesia and pharmacy.**

Different innovations. One connected medication safety platform.

And the industry is taking notice.

Across 2024, 2025 and 2026, Codonics and its medication safety innovations have earned recognition spanning healthcare technology, medication safety, compliance and innovation.

The Healthcare Technology Report

Each recognition was earned for something different. Together, they tell one story: Codonics is changing what medication safety can look like across preparation, administration, documentation and waste.

CODONICS

WE KNEW OUR CUSTOMERS COUNTED ON US...
BUT THE NUMBERS STILL AMAZE US.

Safe Label System®

17,000+

Operating Rooms

Across more than 1,200 hospitals

That kind of trust isn't built with one product, one award or one moment of innovation.

It's earned over time.

And that's what makes the recent recognition of Codonics especially meaningful.

Our awards span healthcare technology, clinical workflows, medication safety, compliance and innovation.

This year, **Safe Waste System**™ received the TAG Award for **Medication Safety & Compliance Innovation**. Judges described SWS as an "intuitive, user-friendly system" that alleviates significant administrative burden, called its role in controlled substance reconciliation "valuable technology," and noted that its "simple and minimal" approach makes it stand out.

Healthcare Focus also named Codonics **Medication Safety Innovator of the Year – USA**.

Different organizations. Different recognition.
A REMARKABLY CONSISTENT MESSAGE.
Codonics is solving the right problems.

For decades, that has meant listening closely to clinicians, understanding where risk and complexity enter the medication-use process, and engineering technology around the people who actually have to use it.

Our commitment is simple: **make the safer, more accountable action easier for the clinician — and help hospitals build greater medication safety, visibility and accountability into everyday workflow.**

And while awards are gratifying, the numbers behind our work may tell the story best.

281 MILLION+
medication preparations*

70 MILLION+
procedures*

2.1 MILLION+
medication errors prevented*

Those aren't award statistics.

They represent the clinicians and hospitals that turned innovation into real-world impact.

And they remind us why we keep pushing forward.

RECOGNIZED FOR INNOVATION.
TRUSTED FOR WHAT IT DELIVERS.
